# **Food Safety Tips for Memorial Day Weekend**

Memorial Day weekend calls for lots of opportunities to enjoy outdoor activities with family and friends, including picnics, barbecues, cookouts and other outdoor parties. The warm weather will be perfect for outdoor eating but it also presents opportunities for foodborne illnesses. Remember the following tips to protect yourself, your family, and friends from foodborne illnesses this Memorial Day weekend:

- Wash hands—Wash hands thoroughly with soap and water for at least 20 seconds, especially
  after using the bathroom, before handling any food, after handling raw poultry or meat, and before
  eating. If there is no bathroom nearby, use a water jug, some soap, and paper towels.
- Keep raw food separate from cooked food—Do not use a plate that previously held raw meat, poultry, or seafood for anything else unless the plate has first been washed in hot, soapy water. Keep utensils and surfaces clean as well.
- Marinate food in the refrigerator, not out on the counter—When finished marinating raw meat, dispose of remaining marinade. Do not use it on cooked food.
- Cook food thoroughly—Use a food thermometer to check that meats and poultry reach a safe internal temperature. Hamburgers should be cooked to 160°F. If a thermometer is not available, make sure hamburgers are brown all the way through, not pink. Chicken should be cooked to at least 165°F. If you partially cook food in the microwave, oven or on a stove to reduce time cooking on the grill, do so immediately before the food goes on the hot grill.
- Keep food out of the Danger Zone!
  - Hot food should be kept at or above 135°F. Hot food should be wrapped well and placed in an insulated container. If bringing hot take-out food like fried chicken or barbecue to an outdoor party, eat it within two hours of purchase. Remember to pack a food thermometer to check that foods are held at a safe internal temperature. Be sure that re-heated food reaches 165°F.
  - Cold food should be held at or below 41°F. Food should not be left out of the cooler or off the grill for more than two hours. Never leave food out for more than one hour when the temperature is above 90°F. Foods like chicken salad and desserts that are in individual serving dishes can be placed directly on ice or in a shallow container set in a deep pan filled with ice. Drain off water as ice melts and replace ice frequently.

More "Food Facts" from the US Food and Drug Adminstration on "Eating Outdoors, Handling Food Safely" can be found at the following link: <a href="http://l.usa.gov/1mftVz1">http://l.usa.gov/1mftVz1</a>.
